

## 2/2 and 3/2 Valve ZNCN/7002

Operation of the Green push-button allows the air supply to the inlet port '1' to pass through the valve to the outlet port '1' when the Red button is depressed with the sleeve in position the inlet and outlet ports are both completely sealed and the valve is able to perform a 'stop valve' function as a 2/2 valve. Removal of the sleeve enables the Red button to be fully depressed to allow the outlet port to connect to exhaust via the slots in the piston to provide a 3/2 function.

### ZNCN/7002

Double push-button operated valve  
Manual Operating Force : 13N
